the 1990s, the number of people with diabetes has increased in all industrialized countries. In the Netherlands, the prevalence of diabetes is 6.5% (1.5% of the population aged 15 years and over) (1). The prevalence of diabetes is expected to increase to 10% by the year 2010 (2).

Diabetes is a chronic disease with a high prevalence and a high mortality. The most common complications of diabetes are cardiovascular disease, nephropathy, retinopathy, and neuropathy. The prevalence of these complications is high, especially in the elderly. The prevalence of cardiovascular disease is 30% in people with diabetes (3). The prevalence of nephropathy is 10% in people with diabetes (4). The prevalence of retinopathy is 10% in people with diabetes (5). The prevalence of neuropathy is 10% in people with diabetes (6).
